Abstract of JP 10042207 (A)

PROBLEM TO BE SOLVED: To provide a television program guidance selection device capable of immediately obtaining outline information of a program during broadcasting at the point of use and easily switching a channel, based on the program information. **SOLUTION:** A program information table building means 81 receives the images of a program chart and the program information such as the start time of all the programs or the like from a program information transmitter 30 installed in a broadcasting station or the like and stores them in a program chart image storage means 82 and a program information table 83. A program chart generation means 84 refers to the program chart image storage means 82 and the program information table 83 and displays the program chart for which the part of the program during broadcasting at the point of execution is emphasized at an input incorporated type means 4. A program selection means 85 detects the input of the input incorporated type means 4 and the channel of a television receiver 40 is switched to the channel corresponding to the input by using a TV selection means 6.
